Patent No. 6703491
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: HOMOLIGE et al.
TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster
FILE REFERENCE: File Reference: 7326-094
CURRENT APPLICATION NUMBER: US/09/270,767
CURRENT FILING DATE: 1999-03-17
NUMBER OF SEQ ID NOS: 62517
SOFTWARE: PatentIn Ver. 2.0
SEQ ID NO 33441
LENGTH: 101
APPLICANT: Zhang, Zemin
TITLE OF INVENTION: SECRETED AND TRANSMEMBRANE POLYPEPTIDES AND NUCLEIC
TITLE OF INVENTION: ACIDS ENCODING THE SAME
FILE REFERENCE: P33.04NLC59
CURRENT APPLICATION NUMBER: US/10/140,002
CURRENT FILING DATE: 2002-05-06
Prior Application removed - See Palm or File Wrapper
NUMBER OF SEQ ID NOS: 550
SEQ ID NO 196

GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: The Upjohn Company
APPLICANT: FOR U.S. PURPOSES ONLY: Elhammer, Ake P. and Homa, Fred L.
TITLE OF INVENTION: A Cloned DNA Enceding a UDP-GaLNAC:
TITLE OF INVENTION: Polypeptide, N-Acetylgalactosaminyltransferase
NUMBER OF SEQUENCES: 19
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 19, Application PC/TUS9402552

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Description

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

               -!- DOMAIN: There are two conserved domains in the glycosyltransferase region: the N-terminal domain (domain A, also called GT1 motif), which is probably involved in manganese coordination and substrate binding and the C-terminal domain (domain B, also called Gal/GalNac-T motif), which is probably involved in catalytic reaction and UDP-Gal binding (By similarity).
-!- DOMAIN: The ricin B-type lectin domain binds to GalNac and contributes to the glycospeptide specificity (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Missing (in isoform 4).

WELGCYDPGIEIWGGEQYEISFK -> MLAWRDGELEAETS
                                                                                                                                                                                                                                                             -!- SIMILARITY: Contains 1 ricin B-type lectin domain.
-!- CAUTION: According to experiments made in rat, this enzyme is unable to transfer GalNAc onto serine or threonine recidue on the protein receptor, but instead requires the prior addition of a GalNAc on a peptide before adding additional GalNAc moieties, thereby acting as a glycopeptide transferase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Catalytic subdomain A.

Balys M.M., Beres T.M., Degand P., Tabak L.A.;

Cloning and characterization of a ninth member of the UDP-

AGINAC.POPLYPEDTIGE N-acety1galactosaminyltransferase family,

D. Biol. Chem. 276:17395-17404 (2001).

U. Biol. Chem. 276:17395-17404 (2001).

C. I. FUNCTION: Catalyzes the initial reaction in O-linked

Oligosaccharide biosynthesis, the transfer of an N-acety1-D-

Galactosamine residue to a serine or threonine residue on the

protein receptor. Has activity toward MucSAc and EA2 peptide

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            subfamily.

SANIARATY: Contains 1 ricin B-type lectin domain.

CAUTION: According to experiments made in rat, this enzyme is unable to transfer GalNAc onto serine or threonine residue on the protein receptor, but instead requires the prior addition of a GalNAc on a peptide before adding additional GalNAc moietles, thereby acting as a glycopeptide transferase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         EMBL; AK131155; BAD21405.1; ALT_INIT.

                                                                                                                                                                                                                                                                                     -I- DOWAIN: There are two conserved domains in the glycosyltransferase region: the N-terminal domain (domain A, also called GT1 motif), which is probably involved in manganese coordination and substrate binding and the C-terminal domain (domain B, also called Gal/GalNAc-T motif), which is probably involved in catalytic reaction and UDP-Gal binding (By similarity).
-!- DOMAIN: The ricin B-type lectin domain binds to GalNAc and contributes to the glycospeptide specificity (By similarity).
-!- SIMILARITY: Belongs to the glycosyltransferase family 2. GalNAc-T
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   -!- SIMILARITY: Contains 1 ricin B-type lectin domain.
-!- CAUTION: According Ref. 1, this enzyme is unable to transfer GalNAc onto serine or threonine residue on the protein receptor, but instead requires the prior addition of a GalNAc on a peptide before adding additional GalNAc moieties, thereby acting as a
similarity).
-!- TISSUE SPECIFICITY: Highly expressed in the sublingual gland,
testis, small intestine, colon and ovary. Expressed at
intermediate level in heart, brain, spleen, lung, stomach, cervix
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Signal-anchor; Transferase; Transmembrane.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Note-No experimental confirmation available;

Note-No experimental confirmation available;

-1-DOMAIN: There are two conserved domains in the glycosyltransferase region: the N-terminal domain (domain A, also called GT1 motif), which is probably involved in marganese coordination and substrate binding and the C-terminal domain (domain B, also called Gal/GalNac-T motif), which is probably involved in catalytic reaction and UDP-Gal binding (By similarity).

-1-DOMAIN: The ricin B-type lectin domain binds to GalNAc and contributes to the glycopeptide specificity (By similarity).

-1-SIMILARITY: Belongs to the glycosyltransferase family 2. GalNAc-T
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
protein receptor (By similarity).
CATALYTIC ACTIVITY: UDP-N-acetyl-D-galactosamine + polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              PROSITE; PS50231; RICIN B LECTIN; 1.
